The Africa Nationally Determined Contributions (NDCs) Hub serves as a resource pool for African countries together with local and international support institutions - public and private, to deliver on the Paris Agreement commitments in an effective and efficient manner.

The Africa NDC Hub is founded on three key pillars:

- **Actions to Foster Long Term Climate Action**: Strengthening national climate policies & translating NDCs into country programs and integrating adaptation, mitigation and development in national plans.

- **Means of Implementation**: Mobilizing long term adequate means of implementation (finance, capacity-building and technology development and transfer) to achieve and sustain NDC commitments while scaling up ambition.

- **Coordination, Advocacy & Partnerships**: Coordination, advocacy, and partnership to increase the pace, scale of reach and ambition of Africa’s NDCs.

As of October 2017:
- All 54 African countries signed the Paris Agreement.
- 43 African countries have ratified their NDCs.
- Estimated financing for NDC in Africa: 4 US$ trillion by 2030.

The Africa NDC Hub is housed in the Climate Change and Green Growth Department (PECG) of the African Development Bank.
