The next time you seek to develop that crucial road or rail infrastructure, staple crop processing zone, energy plant, national or regional program, pause for a minute or two to consider the long-term implications of building critical skills to guarantee the quality and sustainability of your project.

Research shows that one third of the working age population in low-and middle-income countries lack the basic skills required to get quality jobs, leaving them unable to achieve their full productive potential and limiting economic investment and growth.

Mainstreaming the right skills in project design does not only promote sustainability but can help reduce poverty.

By mainstreaming skills and education into projects, you are not only securing a pipeline of skills for project sustainability, you are also enhancing the quality of the labour force around you and thereby lifting some out of poverty.

Education and training are the solid foundations for the future, enabling personal and professional development, and prosperity for men, women and youth alike.
Need Some Help?

Our team of education and skills development experts can help

Meet the Team

Oley DIBBA-WADDA
Director, Human Capital, Youth and Skills Development Department
o.dibba-wadda@afdb.org

Hendrina DOROBA
Manager, Education and Skills Development
h.doroba@afdb.org

Keiko TAKEI
Chief Education Analyst
k.takei@afdb.org

Borel FOKO
Senior Education Economist
Focal point for STI
b.fokotagne@afdb.org

Uyoyo EDOSIO
Senior Education, Innovation and Digital Skills Expert
u.edosio@afdb.org
