**The African Development Bank's Energy, Environment and Climate Change Department (ONEC)** produces this report every year as part of its leadership at AfDB to support Africa's move toward climate-resilient and low-carbon development. The report highlights ONEC's work to expand Africa's access to climate financing through the Climate Investment Funds (CIF), and AfDB's support for Africa's transformations in clean technology, sustainable management of forests, increased energy access through renewable energy, and climate-resilient development.
